

Colchester Garden Club Conservation Project
 Invasive Japanese Knotweed Removal from Ruby and Elizabeth Cohen Woodlands
 96 McDonald Road, Colchester CT

INVASIVE JAPANESE KNOTWOOD

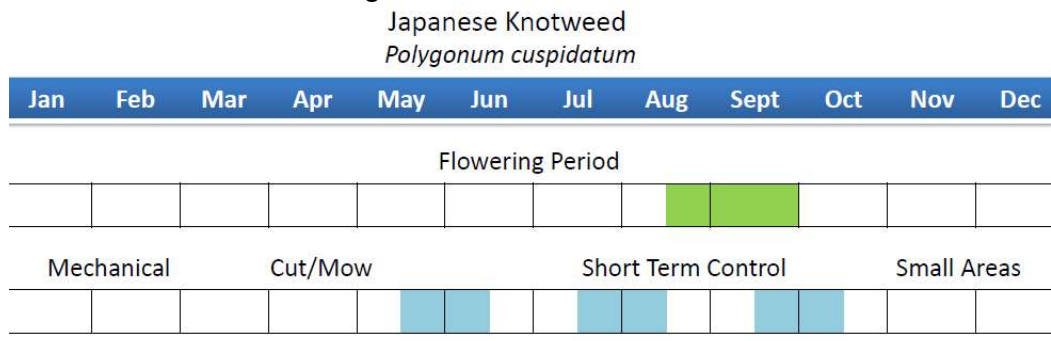

Lovely red new growth

Beautiful red graceful stems

The Colchester Garden Club has started a multi-year conservation project to cut two large stands of Japanese Knotweed at the 206+ acre open space park, Ruby and Elizabeth Cohen Woodlands; waterways from this part flow into two area watershed. This project is in partnership with the Colchester Public Works Department, and the club will reach out to request other community groups and volunteers get involved.

The project will follow the Mechanical/Cutting management of this invasive plant as outlined in the presentation given at the 2018 UConn Connecticut Invasive Plant Working Group Conference on Invasive Plant Management and Calendar rather than use chemicals.

For CT Invasive Working Group's Invasive Plant Management Calendar, go to:
